

Cyclone

EMWIN RECEPTION SYSTEM

- Instant weather warnings and alerts
- Nationwide forecasts and data
- Direct satellite feed
- No subscription charges

The CYCLONE product line taps into the National Oceanic and Atmospheric Administration's EMWIN datastream: a wealth of unencrypted data broadcast over L-band via satellite. You'll get at least 5 to 10 MB of weather data piped into your hard drive every day. The datastream was originally designed as an incredibly fast, reliable way of getting weather warnings into the hands of emergency managers at low cost, but many hobbyists and companies are also reaping the benefits of what EMWIN has to offer, including aviation and forecast data.

We have consistently built our systems by selecting the most reliable and robust hardware on the market, with careful attention to cost so you don't get ripped off. All parts are manufactured by engineering firms we've known and trusted since 1996 and are the best we can find. There's no generic components or no-name foreign manufacturers in any CYCLONE system. Furthermore, we are quite proud of our 100% customer satisfaction record. There has never been an equipment return in our five years of selling CYCLONE.

So — are you ready to tap into the backbone of national weather warnings and meteorological data? Choose CYCLONE!

The quickest way to place your order is by faxing your order to 405.329.5275. You may also contact us at 888.388.0070 or support@weathergraphics.com. Purchase orders are accepted only from United States government agencies on official letterhead. All other orders require prepayment with check, money order, Visa, or Mastercard.
